

Anomaly Detection

Objectives:

- Explore how to use real-time data analysis to detect anomalous activity.

Outline:

- Log Collection
 - Agent-Based
 - Agentless
 - Syslog
- Log Auditing
 - Source Validation
 - Verification of Log Integrity
 - Evidence Collection
- Log Enrichment
 - IP Address and Host Name Resolution
 - Field Name Consistency
 - Time Zones
- Alerts, Reports, and Event Correlation
 - Threat Hunting
 - Long Tail Analysis
 - Intrusion Detection
 - Behavioral Monitoring
- Log Retention
 - Industry Compliance/Regulatory Requirements
- Anomalies
 - False Positives
 - Superhuman logins/geo-velocity
 - APT Activity
 - Botnets
