

Common Threats in the Cloud

Objectives:

At the end of this episode, I will be able to:

1. Describe common threats faced in cloud designs today
2. Describe the basic operational approach of these threats

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember, the division here between on-prem and cloud is a little silly. There is a big blurring between these two designs in this area. Consider making flash cards here if that will help you on these terms and the many others we will be covering:

- Data breaches
- Insecure APIs
- DoS/DDoS
- Compromised credentials

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is a great write up on the Shared Responsibility Security Model that is followed by public cloud vendors.
