

Common Security Vulnerabilities

Objectives:

At the end of this episode, I will be able to:

1. Describe some valuable resources for your research and awareness of security vulnerabilities
2. Provides descriptions of the major categories of vulnerabilities

Additional resources used during the episode can be obtained using the download link on the overview episode.

Here are just some of the major categories and examples:

- Injection vulnerabilities - SQL, HTML, Commands
- Authentication-based vulnerabilities - brute force, session hijacking, redirecting, weak credential exploits
- XSS vulnerabilities
- XSRF vulnerabilities
- Race conditions
- Unprotected APIs
- Buffer overflow

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:
