

Introduction to Cryptography

Objectives:

At the end of this episode, I will be able to:

1. Describe the security enhancements made possible by cryptography
2. Understand different cipher techniques
3. Describe the different approaches of block versus stream ciphers
4. Provide examples of each

Additional resources used during the episode can be obtained using the download link on the overview episode.

Thanks to ciphers and cryptography, we can experience:

- Confidentiality
- Integrity
- Authentication
- Nonrepudiation

There are three very common cipher approaches:

- Substitution
- Polyalphabetic
- Transposition

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

AES for encryption is VERY common now. Here is your chance to learn all about this critical security protocol:
