

Northbound and Southbound APIs of SDN

Objectives:

At the end of this episode, I will be able to:

1. Describe SDN
2. Discuss the use of Northbound and Southbound APIs
3. Discuss the use of DNAC APIs

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the following points:

- The north and south references are in relation to the SDN controller of the network
- The APIs used today for the northbound type are often RESFUL APIs; and keep in mind the southbound APIs can also be RESTFUL
- You can practice and explore DNAC APIs with the DNAC always-on sandbox at Cisco DevNet

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:
