

Intrusion Prevention versus Firewalling

Objectives:

At the end of this episode, I will be able to:

1. Understand the differences between firewalling and intrusion prevention
2. Describe other special purpose security devices such as Remote Access VPN devices, Web Security Appliances, and Email Security Appliances

Additional resources used during the episode can be obtained using the download link on the overview episode.

Here are some key points you should remember from this episode:

- Firewalling is typically used to create network segments and to control traffic flows in and out of these segments.
- Intrusion Prevention devices allow the deep inspection of traffic for known (and even unknown) attack types.
- We have WSA devices for controlling Web traffic.
- We have ESA devices for controlling email traffic and reducing malware and spam attacks that might be transpiring in email.

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is an excellent resource you can use to learn more about different firewalls and IPS types:
