

Hardening the Network Infrastructure

Objectives:

At the end of this episode, I will be able to:

1. Describe the three planes of operation for a Cisco device
2. Provide examples of security technologies you can use to help secure each of these operational planes

Additional resources used during the episode can be obtained using the download link on the overview episode.

We have the management, control, and data planes. You might want to consider practicing listing the various technologies for security and thinking about which plane of operation each of these techniques would help with.

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is a nice resource n network hardening:
