

Cloud Deployment and Service Models

Objectives:

At the end of this episode, I will be able to:

1. Define cloud per the NIST
2. Understand the various service models of cloud
3. Describe the various deployment models for cloud

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the NIST characteristics of cloud:

- On-demand, self-service
- Resource pooling
- Measured service
- Broad network access
- Rapid elasticity

The service models they point out:

- SaaS
- PaaS
- IaaS

The deployment models described are:

- Private
 - Public
 - Hybrid
 - Community
-

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is the excellent read from the NIST:
