

Configure and Verify the WSA

Objectives:

At the end of this episode, I will be able to:

1. Configure and verify the Cisco Web Security Appliance

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the main topics of discussion in this episode:

- The AsyncOS powers the WSA
- You can deploy in explicit mode or in transparent mode
- There are several options to configure in explicit mode - including support for Proxy Auto-Config file usage
- There are several WSA feature engines including - Web Reputation Engine, Web filtering, Application Visibility and Control, cloud access security, antivirus scanning, file reputation, Data Loss Prevention, file sandboxing, file retrospection, and cognitive threat analysis
- There is a dedicated management interface, and then P1/P2 and T1/T2 interfaces
