

Configure and Verify the ESA

Objectives:

At the end of this episode, I will be able to:

1. Describe the components of a typical email system
2. Understand the components of the Cisco ESA
3. Describe the features supported

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the main topics of discussion in this episode:

- There are many potential components of an email system - MTA, MDA, MUA, MSA, IMAP, POP, DNS MX Record
- The most important for us are the MTA, IMAP, POP, DNS MX Record
- We configure ESA Listeners on the ESA in order to receiver mail
- There is a SenderBase for reputation scoring
- There is McAfee and Sophos antivirus support
- There are also outbreak filters, RATs (Recipient Address Tables), and Data Loss Prevention supported

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is a great resource on SenderBase:
