

Describe the Cisco Umbrella Solution

Objectives:

At the end of this episode, I will be able to:

1. Describe the basics of the Cisco Umbrella solution

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the main topics of discussion in this episode:

- This technology comes by way of another Cisco acquisition - OpenDNS
- These products can examine DNS requests and do AI against them
- Anycast is used to make the DNS servers of Cisco Umbrella highly available
- The Secure Internet Gateway feature permits the selective analysis of DNS based on risk
- There is also a passive, historical DNS database that can be used in the analysis
- The WHOIS database can be called upon
- Malware file analysis can be done
- Also - domain co-occurrences can be tracked, anomaly detection is available, and you can watch patterns and geo distribution

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is great overview information about Cisco Umbrella:
