

# Configure and Verify Cisco Umbrella

## Objectives:

At the end of this episode, I will be able to:

1. Understand the different options for Cisco Umbrella usage
2. Describe the packages available and the features they contain
3. Describe the verification process

Additional resources used during the episode can be obtained using the download link on the overview episode.

---

Remember the main topics of discussion in this episode:

- There are three main product bundles - DNS Security Essentials; DNS Security Advantage; Secure Internet Gateway (SIG) Essentials
  - The DNS Security Essentials product consists of - domain filtering, integration with other Cisco products, and AD integration for reporting
  - The DNS Security Advantage product consists of - dynamic blocking of connections that try and bypass DNS, selective proxy, and the Umbrella Investigate AI technology
  - The Secure Internet Gateway Essentials product consists of - Secure Web Gateway, Cloud-delivered firewall, and the cloud access security broker
  - Remember, the general configuration steps are:
    1. Register your public IP address ranges into the Cisco Umbrella system
    2. Configure your edge DNS to direct to Cisco Umbrella
    3. Test your configuration by navigating to <https://welcome.umbrella.com>
-
