

EPP versus EDR and Cisco AMP

Objectives:

At the end of this episode, I will be able to:

1. Understand the concept of EPP
2. Understand the concept of EDR
3. Describe Cisco AMP

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the main topics of discussion in this episode:

- What is an EPP? It is an Endpoint Protection Platform (EPP) - these are known for their inclusion of a personal firewall, providing port and device control, and providing anti-malware. Note they lack threat detection and response intelligence.
- What is an Endpoint Detection and Response system (EDR)? - these are focused on threat detection and response.
- Cisco wanted to combine EPP and EDR with Cisco AMP
- Use Cisco AMP to prevent - uses global threat intelligence (Talos); provides malware blocking; file sandboxing; proactive Protection
- Use Cisco AMP to detect - uses continuous monitoring and analysis; provides agentless detection; uses file-less detection
- Use Cisco AMP to respond - uses cloud-based threat searching; uses automated remediation

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Be sure to check out the Cisco AMP home page for demos, great reading, and a free trial:
