

Configure and Verify 802.1X, MAB, and WebAuth

Objectives:

At the end of this episode, I will be able to:

1. Describe 802.1X
2. Describe MAB
3. Describe WebAuth

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the main topics of discussion in this episode:

- 802.1X is port-based control; it uses EAP
- Supplicant, authenticator, authentication server
- MAC Authentication Bypass allows you to lock access down to MAC address for those devices that cannot do 802.1X
- WebAuth is another way around 802.1X for clients that do not support it; portal for credentials to be entered

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Should you like to see more details on the configuration of 802.1X, check this out:
