

Deploy the FMCv

Objectives:

At the end of this episode, I will be able to:

1. Deploy the FMCv in a virtualized network

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember the general steps here:

Step 1. Ensure the underlying VPC is set up correctly in AWS

Step 2. Deploy the EC2 instance for the FMCv from the AWS Marketplace

Step 3. Be sure to carefully select the options from the components set up in AWS previously

Step 4. Be careful when entering the JSON for the initial password and hostname; avoid special hidden characters

Step 5. Use the Get Instance Screenshot to check on the installation (it can take 30 minutes)

Step 6. Connect to the public IP address in a browser to test

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

Here is the direct link to the online book regarding the FMCv:
