

NGFW Routed Mode

Objectives:

At the end of this episode, I will be able to:

1. Describe routed mode on the NGFW
2. Describe the IRB and BVI concepts

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember:

- Each interface on the routed mode device operates in its own subnet
- Oftentimes, the device is the default gateway for the inside network - the outside network connects to the actual WAN gateway
- You can still have bridge interfaces in one or more bridge groups
- The BVI must exist for each bridge group
- Integrated routing and bridging (IRB) permits communication between the interfaces

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:
