

Active Standby Failover

Objectives:

At the end of this episode, I will be able to:

1. Describe the concept of active-standby failover in Cisco Firepower devices
2. Describe the configuration components required for active-standby failover

Additional resources used during the episode can be obtained using the download link on the overview episode.

Remember:

- The Firepower devices must be identical twins - same model; same software; same number of interfaces
- You must have a failover link
- You can optionally add a separate state link - or you can use a shared link for both failover and state
- Various actions can trigger failover

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:
