

Common Log Ingestion Concepts

Objectives

- Time synchronization
 - Why is time important to logs and security?
 - Some systems require time sync
 - Errors occur when time is off
 - Security Events
 - If this is part of an attack and/or breach
 - Need to establish an accurate event timeline
 - Legally admissible
- Logging levels
 - Determines importance/severity of event
 - Most Common
 - FATAL
 - Crash!
 - ERROR
 - Something unexpected happened
 - Prevented one or some function/action from occurring
 - WARN
 - Something unexpected happened, but...
 - System was able to continue
 - Example: "File custom.conf not found, but not required"
 - INFO
 - Standard log data
 - Who/What happened
 - When did event occur
 - Success status
 - DEBUG
 - Fine grained data
 - Helps to make sure systems are running correctly
 - Often used to troubleshoot issues
 - TRACE
 - Most finely granulated data
 - Used to investigate the difficult of errors
