Learner Objective: *Explain risk management principles*

Description: In this episode, you will learn all about key risk management principles. This includes a discussion of the various risk options common in organizations today. These include accept, transfer, avoid, and mitigate.

-
- Risk Management Principles
 - Avoiding Risk - first you identify the risks, then you plan a course of action to avoid them
 - Transferring Risk - often a special team outside of the organization
 - Mitigating Risk - stop the risk before it has the chance to make an impact
 - Accepting Risk - perhaps an option if the risk is very low or the target assets are not hugely important; you still need to plan for incident response
