

Prioritization and Escalation

At the end of this episode, I will be able to:

1. Understand the concepts of prioritization and escalation

Learner Objective: *Explain the concepts of prioritization and escalation as they refer to cybersecurity incident response*

Description: In this episode, you will learn about the important concepts of prioritization and escalation in the cybersecurity IT space.

- Prioritization and Escalation
 - Prioritization - we can use the NIST SP 800-61 for guidance
 - Evaluate based on:
 - Functional impact of the incident - NONE-LOW-MEDIUM-HIGH
 - Information impact of the incident - NONE-PRIVACY BREACH-PROPRIETARY BREACH-INTEGRITY LOSS
 - Recoverability from the incident - REGULAR-SUPPLEMENTED-EXTENDED-NOT RECOVERABLE
 - Escalation
 - Incident response policy should identify:
 - Potential escalation points in the process
 - Procedures for escalation
 - On-call information
 - Escalation procedure should detail everything including acceptable and expected wait times
-
