

Filename: 2-1-1-analyze-vulnerability-assessment-scanner-output.md

Domain: Implement Vulnerability Scanning Methods and Concepts

Episode: Analyze Vulnerability Assessment Scanner Output

Analyze Vulnerability Assessment Scanner Output

Objectives

- Web application scanners
 - Burp Suite
 - <https://portswigger.net/burp/communitydownload>
 - Zed Attack Proxy (ZAP)
 - Arachni
 - Nikto
- Vulnerability scanners
 - Nessus
 - <https://www.tenable.com/downloads/nessus?loginAttempted=true>
 - OpenVAS
- Debuggers
 - Immunity debugger
 - <https://www.immunityinc.com/products/debugger/>
 - GNU debugger (GDB)
 - `help`
 - `info functions`
 - `disas`
- Multipurpose
 - Nmap
 - Metasploit framework (MSF)
 - Recon-ng
 - <https://github.com/lanmaster53/recon-ng>
 - `workspaces create <workspace_name>`
 - `marketplace help`
 - `marketplace info <module_name>`
 - `marketplace install <module_name>(hackertarget)`
 - `modules load <module_name>`
 - `options set SOURCE itpro.tv`
 - `run`
 - `show hosts`
- Cloud infrastructure assessment tools
 - Scout Suite
 - <https://github.com/nccgroup/ScoutSuite>
 - Prowler
 - <https://github.com/prowler-cloud/prowler>
 - Pacu
 - <https://github.com/RhinoSecurityLabs/pacu>
