-
- SDLC
 - +There are many approaches to the SDLC
 - +It typically starts with the identification of an unmet need and they typically end with a retirement of the software
 - +There are many tasks in this process and many places where cybersecurity experts are needed
 - +Typical tasks include:
 - Identify the organizational needs
 - Design a solution
 - Build a solution
 - Test a solution
 - Deploy the solution to production
 - Maintain the solution
 - Retire the solution
 - +There is a classic method of conducting the early phases of this lifecycle that is called the Waterfall method. More modern approaches follow a paradigm called Agile. Scrum is an example of this technology.
