

Threat Modeling

At the end of this episode, I will be able to:

1. Describe the benefits of threat modeling and how many companies choose to use this valuable technique

Learner Objective: *Describe threat modeling*

Description: In this episode, you will first understand the process of threat modeling and what it entails and why we are performing it. We will then discuss specific frameworks for threat modeling.

-
- Threat Modeling
 - This is a procedure for testing the security of an organization against attacks
 - You should perform threat modeling early and often
 - The security team will be heavily involved, and will also learn the architecture must better as a result of the exercise
 - We often examine factors such as:
 - Adversary capability
 - Total Attack Surface
 - Attack vector
 - Impact
 - Likelihood
 - Sample Frameworks
 - STRIDE
 - PASTA
-
