

Containment, Eradication, and Recovery

At the end of this episode, I will be able to:

1. Given a scenario, perform incident response activities, including proper containment, eradication, and recovery.

Learner Objective: *Discuss the typical steps of containment, eradication, and recovery during incident response.*

Description: In this episode, you will learn about the incident response phases of containment, eradication, and recovery. These are key steps in most typical incident response environments.

-
- Containment, Eradication, and Recovery
 - Containment - reduce or eliminate the spread of the incident; includes preserving evidence
 - Eradication - return all systems to a known good state; rebuild systems
 - Recovery - identify the relevant attack vectors and implement countermeasures
-
