

Vulnerability Management Reporting

At the end of this episode, I will be able to:

1. Describe the importance of vulnerability management reporting and communication.

Learner Objective: *Describe the importance of vulnerability management reporting and communication*

Description: In this episode, the learner will explore the importance of communicating the results of vulnerability and compliance reporting, to an organization.

- Vulnerability management reporting
 - o The outcome of a review that details the weaknesses in an organization's information system and classifies, rates the vulnerabilities according to severity and recommends potential solutions.
 - o Report existing vulnerabilities (or discovered)
 - ♣ What was discovered
 - ♣ What are the affected *systems*?
 - ♣ hosts
 - ♣ processes
 - ♣ software
 - ♣ network
 - o Classifying of vulnerabilities
 - ♣ Risk score - assessment of any event that has a risk
 - ♣ internal risk (employees, asset loss)
 - ♣ external risk (nature disasters, fire, bad actors)
 - ♣ interpret the results for the organization (no jargon)
 - ♣ non-technical employees do not care about memorizing the specifics such as CVE, CVSS, MITRE....etc
 - o Prioritizing of remediation
 - ♣ according to the classification, which should be tackled first
 - ♣ explain the reasoning behind high priority vulnerabilities and the associated risk
 - o Communicating the remediation process
 - ♣ Configuration management
 - ♣ communicate highest risk/impacted systems
 - ♣ configuration changes to be made
 - ♣ risk of patching vs. no change
 - ♣ uptime/downtime
 - ♣ Patch management
 - ♣ communicate the systems
 - ♣ need patched
 - ♣ are affected
 - ♣ patches that are deployed (only
 - ♣ success/failure of applied patches
 - o Know the audience
 - ♣ executive summaries (C-level)
 - ♣ department heads and managers (non-technical)
 - ♣ IT security team (highly technical)
 - ♣ IT staff (network & system admins, support staff)
 - ♣ Development (highly technical)
