

Communicate Vulnerability Metrics and KPIs

At the end of this episode, I will be able to:

1. Describe the importance of reporting and communicating vulnerability metrics and KPIs.

Learner Objective: *Describe the importance of reporting and communicating vulnerability metrics and KPIs*

Description: In this episode, the learner will identify importance communicating metrics and key-performance indicators to stakeholders in a company.

- Metrics and key performance indicators (KPIs) (4)
 - o Trends
 - ♣ Gartner
 - ♣ Responding to threats
 - ♣ Attack Surface Expansion (changes to digital system, modern workplaces)
 - ♣ Identity Threat Detection and Response (Identity as a new perimeter, sustained attacks)
 - ♣ Digital Supply Chain Risk (disclosure of sensitive information, compromise of infrastructure, security flaws in products delivered/sold to customers.
 - ♣ Rethinking technology
 - ♣ Vendor Consolidation (Supply management strategy)
 - ♣ Cybersecurity Mesh - a set of tools and controls to secure modern enterprise.
 - o Top 10 - OWASP Top Vulnerabilities
 - o Critical vulnerabilities and zero-days
 - ♣ Crucial part of vulnerability management
 - ♣ Identifying 20K vulnerabilities is not as important as addressing the highest priority vulnerabilities that directly affect the information systems (keep in mind SLAs/SLOs)
 - ♣ Remember zero-days, systems are at their most vulnerable until patches are developed, released and deployed
 - o Service Level Objectives
 - ♣ A measurable characteristic of a service level agreement (SLA)
 - ♣ Defines the best performances levels and the lowest amount of service that is acceptable be an SLA
 - ♣ Quantifiable metrics that show the reliability of a system
 - ♣ Should be understood by technical staff and communicated appropriately to leadership
 - All of these attributes must be communicated to the stakeholders
 - o IT technical teams
 - o Business leadership
 - o Customers (service interruptions)
-
