

Communicate Root Cause Analysis

At the end of this episode, I will be able to:

1. Identify the importance of communicating post-incident response processes.

Learner Objective: *Identify the importance of communicating post-incident response processes*

Description: In this episode, the learner will identify the importance post-incident response processes such as root cause analysis and lessons learned.

- Root Cause Analysis (RCA) - investigation to discover the underlying cause(s) for security incidents
 - o Identify vulnerabilities and or contributing factors
 - o Clear and consise breakdown of the underlying circumstances
 - ♠ Timeline of events
 - o Discovery circumstances can effect other systems
 - ♠ Example: missing security on the effected system as well as other directly effected systems
 - o Deploy strategic controls/countermeasures
 - o Reduce or limit the impact
 - o Avoid reoccurrence
 - RCA Report - may be necessary for compliance reporting
 - o Date and time of the incident occurence
 - o What event happened
 - o How was the incident discovered
 - o Who reported the incident
 - Lessons Learned
 - o Incident Response Team (IRT) and everyone involved in the incident response process should be included
 - o Formal session(s)
 - o What went right, what went wrong, where can we improve?
 - o Identify roadblocks or barriers to remediation and recovery
 - o Can identify changes that need to be made to the incident response plan (IRP)
 - o Identify and document new Indicators of Compromise (IOC)
-
