- Episode Name: Web and Cloud Discovery and Enumeration

Web and Cloud Discovery and Enumeration

Objectives:

- List common web and cloud based assets that should be discovered and enumerated during a penetration test
- List and describe the techniques and tools used for discovering and enumerating web and cloud assets

- WebSite Recon

- Domains

- Subdomains

- `nmap --script=dns-brute.nse`
 - `fierce`
 - `dnsmap`
 - `sublist3r`
 - `theHarvester --dns-brute`

- URLs

- Crawling sites

- Scraping sites

- Directory Fuzzing

- DirBuster

- gobuster

- Dirb

- Tokens (Authorization/Access Tokens OAuth/JWT)

- Scoping

- Issuing

- Revocation

- Capture API requests/responses

- Sniffing for Web Traffic

- Cloud Asset Discovery

- `cloud_enum`

- 3rd-party hosted services
