- Episode Name: Defense Detection and Avoidance

Defense Detection and Avoidance

Objectives:

- List and describe common security controls that a penetration tester may encounter during a penetration test
- List and describe common tools and techniques used by penetration testers to detect and avoid common security controls

• Defenses

◦ Load Balancers

- Difficult to detect
 - LBs are meant to be transparent

▪ DNS info

- `nslookup itpro.tv`

▪ WAFW00F

- `nmap`
- http headers

◦ WAF

▪ WAFW00F

- `nmap --script=http-waf-detect.nse itpro.tv`
- cookies
- Detection Avoidance

- Encoding
- Encryption

◦ AV

- Assume it's presence
- Look for network traffic that is related to AV
 - Updates
- Detection Avoidance
 - Create custom programs/malware
 - File-less malware

◦ Firewall

- Firewalking
- Detection Avoidance
 - Fragmentation
 - Use proxy
 - Use decoys
