- Topic Name: Attacks and Exploits
- Episode Name: IoT Attacks

IoT Attacks

Objectives:

- List and describe IoT vulnerabilities and explain how they can be leveraged against an organization
-

- Special Considerations

- Fragile Environment
- Availability Concerns
- Data Corruption
- Data Exfiltration

- Vulnerabilities

- Insecure Defaults
- Clear-Text Communication
- Hard-Coded Configurations
- Outdated Firmware/Hardware
- Data Leakage
- Use of Insecure or Outdated Components

- Demo: Hacking an IP Camera

- nmap ping scan subnet
- nmap scan foscaml
- Try to login to foscaml web portal
- Brute-force creds using **foscaml-brute.sh**
- Login to foscaml
- *Basic Settings > Camera Time*

- Use dev tools to modify NTP server name to be ...

- `;/usr/sbin/telnetd -p37 -l /bin/sh;`
