- Episode Name: Password Attacks

=====

Password Attacks

Objectives:

- Define and describe commonly employed password attacks
 - List commonly used password attack tools
-

- Hash Cracking

- Brute-Force
- Dictionary
 - Tools
 - Cewl
 - John the Ripper
 - Hashcat
 - Ophcrack
 - Cain and Able

- Password Spraying

- Hydra
- Medusa
- Patator

- Kerberoasting

- Allows the attackers, as valid domain users, to request a Kerberos service ticket for ANY SERVICE!
 - Attacker captures that ticket granting service (TGS) ticket from memory
 - Attacker then attempts to crack the service credential hash offline
 - JtR/Hashcat
- Service Principal Names (SPNs)
 - Unique identifier for a Service instance
 - Format: Service Name/Machine Name@domain
- Demo
 - `impacket-GetUserSPNs -dc-ip 192.168.241.200 domain/username -request`

- NTLM relay attacks

- LLMNR/NBT-NS
