- Show Name: Intro to IoT Pentesting
- Topic Name: IoT Basics
- Episode Name: IoT Security

=====

IoT Security

Objectives:

- Describe the common security issues that are common to IoT devices
-
- Are IoT Devices generally insecure?
 - It seems so
 - Getting better
 - Why is IoT generally insecure?
 - Functionality over Security
 - Large variety of ways to connect
 - Wired
 - Wifi
 - Bluetooth
 - Zigbee
 - Cell
 - Not much standardization, if any
 - Profits drive production
 - The quicker and cheaper you make something, the higher the profit margin
 - Security testing and SDLC take time and cost money
 - End User
 - Security is available, but end user doesn't implement it
 - Doesn't change defaults
 - Doesn't implement encryption
 - Doesn't install updates/security patches
 - What are some of the common IoT security issues?
 - OWASP Top 10 IoT
