- Show Name: Intro to IoT Pentesting
- Topic Name: Target Analysis
- Episode Name: OS and Network Service Enumeration

=====

OS and Network Service Enumeration

Objectives:

- Utilize techniques and tools to attempt to enumerate target device OS and/or network services
- Analyze target for possibly exploitable vulnerabilities

-
- Why do we need to identify the OS and network services?
 - Helps us focus our plan of attack
 - Windows exploits don't tend to work on Linux
 - What tools are commonly used for this type of recon?
 - Shodan
 - Censys
 - Nmap
 - Masscan
 - Demonstrate using Shodan and Nmap
