- Show Name: Intro to IoT Pentesting
- Topic Name: Exploiting Vulnerabilities
- Episode Name: Exploiting Network Services

=====

Exploiting Network Services

Objectives:

- Perform network service exploitation against IoT target devices
-
- Why is this an important topic?
 - Don't want to assume anything
 - IoT devices may very well be running traditional network services
 - FTP
 - Telnet
 - SSH
 - HTTP
 - etc
 - Lean on traditional network based attacks
 - nmap scan devices
 - Anything with a login = brute-force
 - Default creds
 - Password reuse
 - No login
 - Weak creds
 - CVEs and PoCs
 - Exploit-DB
 - Vulners
 - <https://nmap.org/nsedoc/scripts/telnet-brute.html>
 - `nmap -p 23 --script telnet-brute --script-args userdb=myusers.lst,passdb=mypwds.lst,telnet-brute.timeout=8s <target>`
 - FTP
 - `hydra -l admin -P common_passwords.txt -f ftp://<target>`
