=====

Firmware Backdoor

Objectives:

- Utilize firmware analysis, the Firmware Analysis Toolkit, and the Firmware Modkit in attempt to create custom backdoored firmware

-
- Let's discuss "backdoors"
 - Covert access
 - How do we get a "backdoor" onto a target device?
 - Customize the manufacturers firmware to include backdoor
 - Social Engineering for installation
 - Replace device with malicious device
 - Where do we start?
 - Firmware analysis
 - Startup
 - Pre-installed binaries
 - What if there aren't any useful pre-installed binaries
 - Custom tools
 - Meterpreter/MSFVenom
 - Custom built
 - Cross-Compiled
 - Pre-Compiled
 - <https://github.com/darkerego/mips-binaries>
 - Steal them from other firmware
 - Testing
 - Use Firmware Analysis Toolkit to make sure things are working
 - Upload to Device
 - Final testing
 - Upload backdoored firmware to physical device
 - Test for functionality
 - Social Engineering Attack
 - Physical Access
