

Code Decode Lab - Hands-On Python Tutorial

Lab Objective

This instructor version includes expected code behavior and explanations for each part of the lab.

Part 2 - Correct Test Example

Use a non-ASCII word to demonstrate encoding/decoding:

```
test_word = '?????'  
encoded = encode_word(test_word)  
print('Original:', test_word)  
print('Encoded (bytes):', encoded)  
decoded = decode_word(encoded)  
print('Decoded (string):', decoded)
```

Expected Output

```
Original: ?????  
Encoded (bytes): b'\xe3\x81\x93\xe3\x82\x93\xe3\x81\xab\xe3\x81\xa1\xe3\x81\xaf'  
Decoded (string): ?????
```
